

## VPI Generation Environmental Policy

### Principles

The Vitol Power International Generation Environmental Policy defines the framework for the Environmental Management System (EMS) by setting out the Principles and Practices to be adopted by all personnel working for or on behalf of the company. This policy applies to all employees, contractors and visitors and will be made available to any interested parties on request. The EMS addresses the requirements of the BS ISO 14001 standard and is subject to a continuous improvement process.

- VPI Generation are committed to achieving the best possible environmental performance allied with the efficient use of natural resources by adopting the following principles:
- Reinforcing that good environmental performance is important to everyone who works within our business.
- VPI Generation will comply with all applicable environmental regulations and seek effective working relationships with the appropriate agencies.
- Implementing management systems for environmental performance and by seeking external accreditation to demonstrate compliance.
- Creating action plans and measurable environmental targets that are included in our business plans and supported by personal objectives as a commitment to continual improvement within environmental management.
- Seeking input from, and working constructively with everybody who works with us, including Stakeholders and Regulators, by discussing matters in a transparent way and maintain relationships at all levels to ensure we meet our compliance obligations.

### Practice

We regard compliance with applicable legislation as a minimum level of achievement and we will comply with other requirements that relate to our environmental aspects. Furthermore, we are committed to managing, monitoring and reducing, where practicable, the environmental impacts caused by our business through continual improvement of our operations, in particular emissions to air and water, disposal of waste and the use of natural resources. We will refer to relevant best industrial practices to help us in our drive for continual improvement in environmental performance.

David Brignall  
VPI Generation Manager
